CIS Tech Advisory

IT & Infrastructure Advisory Practice

A right-sized, advisory-led response to enterprise IT strategy, sovereignty regulation, cloud complexity and infrastructure modernisation — built for CIOs, CTOs and CDOs across the US, UK and Europe.

LEVEL 1 OFFERINGS · SALES & CLIENT
PARTNER ENABLEMENT · 2026

EXECUTIVE SUMMARY

Advisory at the Core of Every Infrastructure Decision

Enterprise IT and infrastructure decisions have become board-level questions — strategic (where IT is heading), regulatory (DORA, NIS2, EU AI Act), economic (cloud and AI spend) and architectural (where workloads should live) all at once. CIS Tech Advisory gives clients a fast, credible, advisory-led way to answer them — and, because we also deliver, a partner who can execute the answer.

WHY THE TIMING CAN'T WAIT

STRATEGIC DIRECTION

No agreed horizon

3–5 year IT direction, operating model and technical debt are unquantified — every downstream decision is made without a frame.

WORKLOAD PLACEMENT

No rationale

Where each workload should run — public, private, edge or repatriated — has no agreed basis.

REGULATORY CONVERGENCE

2026 enforcement

DORA, NIS2 and the EU AI Act all reach live enforcement in 2026 — compliance is now an operating question.

CONCENTRATION RISK

Hyperscaler lock-in

Heavy dependence on a single hyperscaler creates lock-in, exit and resilience risk.

RUNAWAY SPEND

Cloud & AI cost

Cloud and AI costs are material and largely ungoverned; FinOps is now accountable for tokens as well as cloud.

NO SINGLE VIEW

Fragmented picture

Teams cite different regulations; there is no common picture across IT, security, legal and the business.

HOW IT WORKS Every pillar runs fixed-scope Level 1 engagements on the same **Understand → Ideate → Accelerate** model — fast, fixed-fee, and a natural path into larger transformation work.

OUR SOLUTION

Seven Advisory Pillars, One Delivery Model

CIS Tech Advisory spans seven pillars across the enterprise IT estate. Five are live today with dedicated Level 1 offerings; two more are framed and in development — every one delivered on the same phased model.

FIVE LIVE PILLARS

LIVE Enterprise IT Strategy 3-5 year IT direction, operating model & technical debt.	LIVE Digital Sovereignty Regulatory-aligned sovereignty across cloud, data, AI & resilience.	LIVE Public Cloud Strategy, workload placement, FinOps & AI-ready foundations.
LIVE AI Infusion GenAI & agentic AI value, governance & consumption control.	LIVE Core Infrastructure Private cloud, edge computing & on-premise data centre.	Five live pillars, each with dedicated Level 1 offerings.

TWO IN DEVELOPMENT

COMING SOON Private Cloud & On-Prem DC Dedicated Level 1 offerings in development.	COMING SOON Networking Advisory SASE / SD-WAN, connectivity & zero-trust.	Further pillars extend across the estate as the practice grows.
--	---	---

ONE DELIVERY MODEL ACROSS EVERY PILLAR

DELIVERY MODEL

How We Deliver — Understand · Ideate · Accelerate

Every engagement, across every pillar, runs in three phases — right-sized to your budget and delivered largely offshore. Advisory that leads to action, not a shelf-ware report.

1 Understand

Gather documents, run interviews and intake workshops to map the landscape and exposure.

2 Ideate

Co-create the solution with your teams through working sessions — priorities, target-state and options.

3 Accelerate

Build the final report, executive presentation, final playback and next actions — ready to mobilise.

GOVERNANCE A checkpoint after each phase confirms findings, manages scope and de-risks delivery — the cadence that reassures clients concerned about offshore delivery.

PRACTICE DIFFERENTIATION

Why LTM for CIS Tech Advisory

Five reasons sales and clients back our advisory — specific, not generic.

01 25 Years of Industry Experience

Deep delivery across regulated sectors — BFSI, manufacturing, healthcare, public — in the US, UK and Europe. Advisors who know the operating reality, not just the theory.

02 Partnership with Major Vendors for Accelerators

Strategic alliances with leading hyperscalers and infrastructure partners give every engagement access to proven, co-developed accelerators.

03 In-House Accelerators

Owned platforms and reusable assessment frameworks — built by LTM, refined across engagements — speed up every phase of delivery.

04 Seamless Advisory & Execution

We don't hand clients off after the recommendation. The roadmap we propose is one we can build and run — lowering execution risk end to end.

05 Thought Leaders in the Space

Point-of-view content, regulatory-aligned frameworks and market-facing research keep our advisory ahead of where the market is heading.

PILLAR 1 · ENTERPRISE IT STRATEGY

The Horizon, the Operating Model & the Debt Beneath It

IT strategy is where the board conversation actually starts — the 3-5 year direction, the operating model that will support it, and the technical debt that will hold it back. The front door through which cloud, sovereignty and AI decisions all connect.

THE BOARD-LEVEL QUESTIONS IT ANSWERS

Direction

Where next?

A 3-5 year IT vision the board can fund — not a wish-list IT would prefer.

Organisation

Built to deliver?

The operating model, decision rights and sourcing to actually execute it.

Debt

What holds us back?

Technical debt quantified as cash, risk and change velocity — with a paydown case.

THREE LEVEL 1 OFFERINGS AT A GLANCE

	S1 · IT for the Future	S2 · Target Operating Model	S3 · Technical Debt Portfolio
DURATION	4-6 weeks	6-12 weeks	4-6 weeks
QUESTION ANSWERED	Where should IT be in 3-5 years?	How do we organise to get there?	What debt is holding us back?
BEST FOR	Board wants a funded IT direction	Restructuring the IT function	Modernisation stalled by legacy
HEADLINE OUTPUT	Board-endorsable IT strategy + horizon-based portfolio	Mobilisable TOM blueprint + transition plan	Costed, sequenced paydown plan + board narrative

A NATURAL PROGRESSION

Strategy sets the horizon, the operating model builds the organisation to reach it, and the debt assessment funds the journey. Most accounts open here — then the strategy points directly into the Sovereignty, Public Cloud and AI Infusion pillars.

PILLAR 2 · DIGITAL SOVEREIGNTY

Regulatory-Aligned Advisory Across Cloud, Data & AI

Sovereignty has moved from a compliance footnote to a board-level operating question: can we keep running — and keep control of our data and systems — if regulatory or geopolitical conditions change?

THREE DEADLINES CONVERGING IN 2026

Q1 2026

DORA

First live supervisory cycle — first fines issued.

Aug 2026

EU AI Act

High-risk system obligations apply.

Oct 2026

NIS2

Enforcement and first penalties; scope widens sharply.

FIVE LEVEL 1 OFFERINGS AT A GLANCE

	A · Quick Posture	B · Readiness Assessment	C · App Portfolio Mapping	D · Cross-Border Data	E · Sovereign AI Readiness
DURATION	1 week	4-8 weeks	4-6 weeks	2-4 weeks	3-5 weeks
QUESTION ANSWERED	Where do we stand?	Are we ready — what will it cost?	What do we do with each app?	Where does data move — is it defensible?	Is our AI sovereignty-ready?
BEST FOR	Board wants a fast read	Committing budget & mobilising	Large estate, unclear priorities	DPO can't defend transfers	AI in production under the AI Act
HEADLINE OUTPUT	Exec snapshot + 30/60/90 plan	Evidence baseline + costed roadmap	Disposition + wave roadmap	Defensible position + 90-day list	Sovereign-AI scorecard + target pattern

A NATURAL PROGRESSION

Fast diagnostic → costed roadmap → application-level execution — with Cross-Border Data and Sovereign AI Readiness as sharp, fundable entry points on a specific exposure. Most accounts start with A, then progress or take a bundle.

PILLAR 3 · PUBLIC CLOUD

Strategy, Placement, FinOps & AI for the Cloud You Own

Cloud is no longer "lift everything to one hyperscaler." AI, cost pressure and sovereignty are forcing sharper decisions about what runs where — and how every dollar, and every token, is governed.

~89%

of enterprises already run multicloud — hybrid is the default.

1 in 5

migrated workloads is being rebalanced back to private / on-prem.

~98%

of FinOps teams now manage AI spend, not just cloud cost.

FIVE LEVEL 1 OFFERINGS AT A GLANCE

	PC1 · Right Cloud & Placement	PC2 · FinOps Excellence	PC3 · AI-Ready Foundations	PC4 · Strategy & Roadmap	PC5 · Well-Architected
DURATION	3-5 wks	4-6 wks	3-4 wks	4-6 wks	2-4 wks
QUESTION ANSWERED	Which cloud, where does each workload run?	Value for cloud & AI spend?	Can our cloud support AI at scale?	The full adoption plan?	Is our infra well-architected?
BEST FOR	Contemplating / rebalancing cloud	Rising or opaque cloud bills	Cloud not yet AI-ready	Want end-to-end adoption plan	Live workloads needing health-check
HEADLINE OUTPUT	Placement heatmap + anchor-cloud stance	Maturity baseline + savings + practice	Readiness scorecard + remediation	Strategy + phased migration roadmap	Scorecard + remediation

CROSS-SELL

Sovereignty and AI Act lenses run through every offering — a natural cross-sell into Digital Sovereignty and AI Infusion. PC1 and PC4 overlap deliberately: PC1 is the sharp placement decision, PC4 the full adoption plan.

PILLAR 4 · AI INFUSION

From Scattered Pilots to Governed, Funded AI Adoption

Turn scattered AI experiments into a prioritised, funded and governed adoption path. Advisory that finds where GenAI and agentic AI move the numbers, checks the foundation can support them, and builds the responsible-AI and consumption guardrails a 2026 regulatory environment demands.

Aug 2026

EU AI Act high-risk obligations apply — governance is no longer optional.

~98%

of FinOps teams now manage AI spend; token cost is the new unit metric.

#1

AI value management is the top FinOps hiring skill for 2026.

FIVE LEVEL 1 OFFERINGS AT A GLANCE

	AI1 · Opportunity & Value	AI2 · Readiness & Data Foundation	AI3 · Responsible AI & Governance	AI4 · Cost & FinOps for AI	AI5 · TokenOps
DURATION	3-5 wks	3-4 wks	3-5 wks	3-4 wks	3-4 wks
QUESTION ANSWERED	Where will AI move the numbers?	Can our foundation support AI?	Are we governed for the AI Act?	Is AI spend under control?	Is GenAI consumption governed?
BEST FOR	Scattered pilots, no priorities	Before AI hits production	High-risk AI from Aug 2026	AI spend rising fast	Token / agent spend unmanaged
HEADLINE OUTPUT	Prioritised use-case wave + KPIs	Readiness scorecard + remediation	AI governance blueprint	Per-use-case unit economics + optimisation	TokenOps blueprint + operating cadence

CROSS-SELL

AI Infusion sits directly on top of Public Cloud (AI-ready foundations, FinOps) and Digital Sovereignty (Sovereign AI Readiness, the AI Act). TokenOps extends FinOps discipline to tokens, agents and inference — before the bill forces the conversation.

PILLAR 5 · CORE INFRASTRUCTURE

The Estate That Stays Close to the Business

Advisory across the infrastructure that stays close to the business — private cloud, edge computing and the on-premise data centre — modernised for an AI-, cost- and sovereignty-driven era.

NEED OF THE HOUR

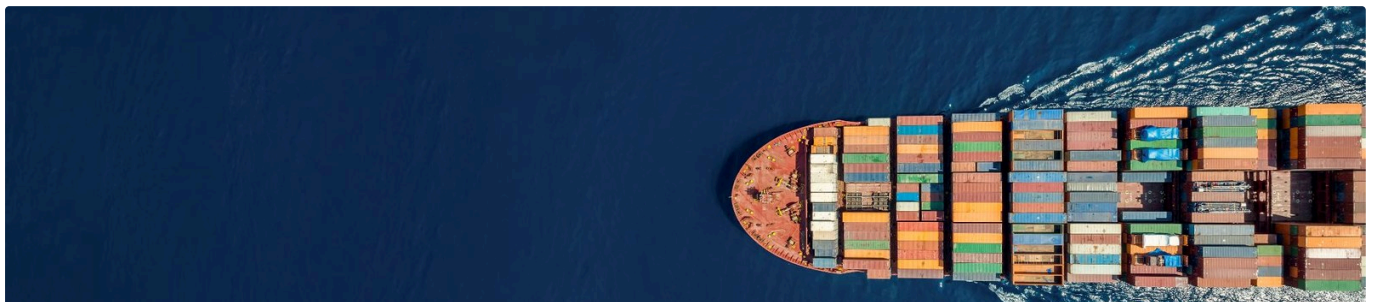

- ~76% of CIOs are negative on Broadcom's VMware changes; ~67% are pursuing alternatives.
- ~56% of enterprises now run or plan AI inference on private cloud.
- Latency-sensitive, data-gravity workloads are pushing compute to the edge.
- Data-centre modernisation and exit decisions need a hybrid-by-design plan.

OFFERINGS UNDER THIS PILLAR

Private Cloud & VMware-Alternative Advisory

Edge Computing Strategy & Workload Placement

Data Centre Modernisation / Exit Advisory

**Status**

The pillar is open for client conversations now. Detailed Level 1 engagement packaging — duration, deliverables and scope — is in development, following the same Understand → Ideate → Accelerate model as the other live pillars.

PRACTICE ROADMAP

What's Next — Coming Soon Pillars

Two additional advisory pillars are framed and in development, extending CIS Tech Advisory across the rest of the enterprise IT estate.

COMING SOON

Private Cloud & On-Premise Data Centre

Dedicated Level 1 offerings for the private-cloud and on-premise estate, building on the Core Infrastructure pillar.

Need · VMware-alternative pressure accelerating private-cloud decisions · AI inference workloads moving back on-premise · DC exit & consolidation plans need a clear roadmap

COMING SOON

Networking Advisory

Modernising the enterprise network for a cloud-, AI- and hybrid-work-first world.

Need · A decisive shift from appliance-based WAN toward SASE / SSE · Hybrid work & multicloud strain legacy network designs · AI and edge traffic reshaping bandwidth and latency needs

SAME MODEL Both pillars will package fixed-scope Level 1 engagements on the same Understand → Ideate → Accelerate cadence as the five live pillars — advisory that leads to action, delivered largely offshore.

VALUE DELIVERED

Outcomes Across Every Engagement

Clients adopting CIS Tech Advisory achieve measurable outcomes across clarity, compliance, cost and secure AI innovation — advisory that leads to action.

Clarity Before Commitment

Board-ready reads on exposure in days, not months — a single common view where teams heard DORA, NIS2 and the EU AI Act separately.

Reduced Concentration Risk

First-pass exit and multi-vendor strategy surfaces hyperscaler and vendor lock-in early and lowers it.

Defensible, Costed Roadmaps

Evidence-based, sequenced plans tied to regulatory deadlines that boards and regulators can trust.

Governed AI Adoption

Infuse GenAI and agentic AI with sovereignty, cost and responsible-AI guardrails — and TokenOps discipline on consumption — built in from the start.

A Funded IT Direction

A 3–5 year strategy, operating model and technical-debt paydown the board can fund — the frame every other decision hangs on.

Right-Sized Investment

Roughly one-third of Tier-1 consulting fees, delivered largely offshore, with co-creation and phase checkpoints keeping you in control.

LET'S START THE CONVERSATION

Position the Quick Read as the easy first step

One week. Board-ready output. A natural path into the full advisory practice.

ENTERPRISE IT STRATEGY

IT for the Future

4-6 weeks · a board-endorsable 3-5 year IT direction

DIGITAL SOVEREIGNTY

Quick Posture Assessment

1 week · board-ready read on exposure

Take control of your infrastructure agenda.

Bring the offer to sales & client partners today — the low-risk entry point on any account feeling strategic, regulatory or hyperscaler-concentration pressure.

LTM is a global technology services and consulting company and the business creativity partner to the world's largest and most disruptive companies. Together with our global network of hyperscaler partners, LTM — **A Larsen & Toubro company** — owns business outcomes for its clients, helping them not simply to outperform the market, but to **Outcreate** it.
