# CIS Tech Advisory

## IT & Infrastructure Advisory Practice

A right-sized, advisory-led response to sovereignty regulation, cloud complexity and infrastructure modernization — built for CIOs, CTOs and CDOs across the US, UK and Europe.

---

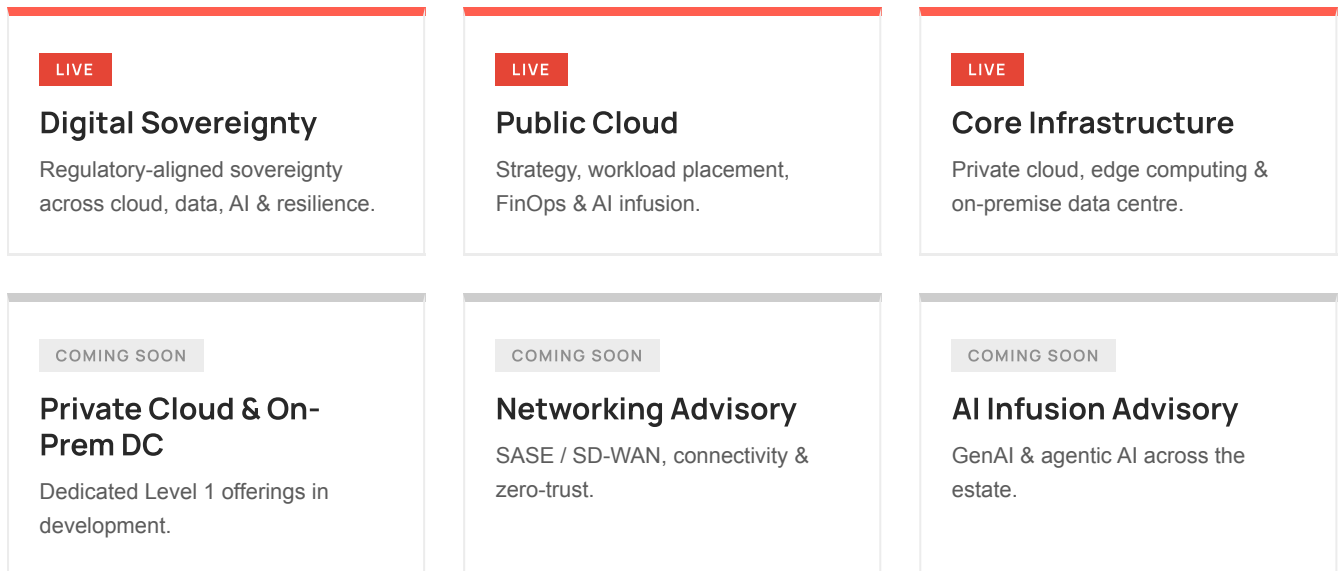

LEVEL 1 OFFERINGS | SALES & CLIENT PARTNER ENABLEMENT | 2026

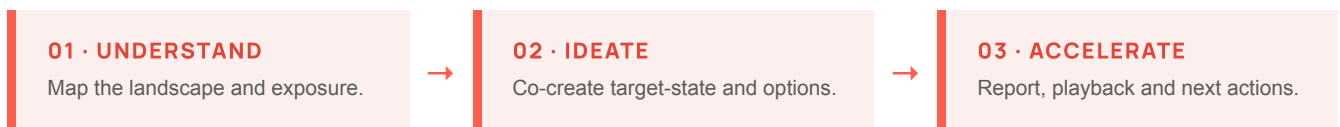

## OUR SOLUTION

# Six Advisory Pillars, One Delivery Model

CIS Tech Advisory spans six pillars across the enterprise IT estate. Three are live today with dedicated Level 1 offerings; three more are framed and in development — every one delivered on the same phased model.

## ONE DELIVERY MODEL ACROSS EVERY PILLAR

## DELIVERY MODEL

# How We Deliver — Understand • Ideate • Accelerate

Every engagement, across every pillar, runs in three phases — right-sized to your budget and delivered largely offshore. Advisory that leads to action, not a shelf-ware report.

1

**UNDERSTAND**

Gather documents, run interviews and intake workshops to map the landscape and exposure.

2

**IDEATE**

Co-create the solution with your teams through working sessions — priorities, target-state and options.

3

**ACCELERATE**

Build the final report, executive presentation, final playback and next actions — ready to mobilise.

**GOVERNANCE**

A weekend checkpoint after each phase confirms findings, manages scope and de-risks delivery — the cadence that reassures clients concerned about offshore delivery.

## PRACTICE DIFFERENTIATION

# Why LTM for CIS Tech Advisory

Five reasons sales and clients back our advisory — specific, not generic.

## 01 25 Years of Industry Experience

Deep delivery across regulated sectors — BFSI, manufacturing, healthcare, public — in the US, UK and Europe. Advisors who know the operating reality, not just the theory.

## 02 Partnership with Major Vendors for Accelerators

Strategic alliances with leading hyperscalers and infrastructure partners give every engagement access to proven, co-developed accelerators.

## 03 In-House Accelerators

Owned platforms and reusable assessment frameworks — built by LTM, refined across engagements — speed up every phase of delivery.

## 04 Seamless Advisory & Execution

We don't hand clients off after the recommendation. The roadmap we propose is one we can build and run — lowering execution risk end to end.

## 05 Thought Leaders in the Space

Point-of-view content, regulatory-aligned frameworks and market-facing research keep our advisory ahead of where the market is heading.

PILLAR 1 · DIGITAL SOVEREIGNTY

# Regulatory-Aligned Advisory Across Cloud, Data & AI

Sovereignty has moved from a compliance footnote to a board-level operating question: can we keep running — and keep control of our data and systems — if regulatory or geopolitical conditions change?

THREE DEADLINES CONVERGING IN 2026

|                                                                                                    |                                                                                           |                                                                                                         |
|----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| <p><b>Q1 2026</b></p> <p><b>DORA</b></p> <p>First live supervisory cycle — first fines issued.</p> | <p><b>Aug 2026</b></p> <p><b>EU AI Act</b></p> <p>High-risk system obligations apply.</p> | <p><b>Oct 2026</b></p> <p><b>NIS2</b></p> <p>Enforcement and first penalties; scope widens sharply.</p> |
|----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|

THREE LEVEL 1 OFFERINGS AT A GLANCE

|                   | A · Quick Posture             | B · Readiness Assessment              | C · App Portfolio Mapping        |
|-------------------|-------------------------------|---------------------------------------|----------------------------------|
| DURATION          | 1 week                        | 4–8 weeks                             | 4–6 weeks                        |
| QUESTION ANSWERED | Where do we stand?            | Are we ready — and what will it cost? | What do we do with each app?     |
| BEST FOR          | Board wants a fast read       | Committing budget & mobilising        | Large estate, unclear priorities |
| HEADLINE OUTPUT   | Exec snapshot + 30/60/90 plan | Evidence baseline + costed roadmap    | Disposition + wave roadmap       |

|                                     |                                                                                                                                                                      |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>A NATURAL PROGRESSION</b></p> | <p>Fast diagnostic → costed roadmap → application-level execution plan. Most accounts start with A, then progress to B and/or C — or take all three as a bundle.</p> |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|

PILLAR 2 · PUBLIC CLOUD

# Strategy, Placement, FinOps & AI for the Cloud You Own

Cloud is no longer “lift everything to one hyperscaler.” AI, cost pressure and sovereignty are forcing sharper decisions about what runs where — and how every dollar, and every token, is governed.

~89%

of enterprises already run multicloud — hybrid is the default.

1 in 5

migrated workloads is being rebalanced back to private / on-prem.

~98%

of FinOps teams now manage AI spend, not just cloud cost.

FIVE LEVEL 1 OFFERINGS AT A GLANCE

|          | PC1 · Right Cloud & Placement              | PC2 · FinOps Excellence                | PC3 · AI Infusion                    | PC4 · Strategy & Roadmap            | PC5 · Well-Architected              |
|----------|--------------------------------------------|----------------------------------------|--------------------------------------|-------------------------------------|-------------------------------------|
| DURATION | 3–5 wks                                    | 4–6 wks                                | 3–4 wks                              | 4–6 wks                             | 2–4 wks                             |
| QUESTION | Which cloud, where does each workload run? | Value for cloud & AI spend?            | Where can AI add value on our cloud? | The full adoption plan?             | Is our infra well-architected?      |
| BEST FOR | Contemplating / rebalancing cloud          | Rising or opaque cloud bills           | On cloud, under-using AI             | Want end-to-end adoption plan       | Live workloads needing health-check |
| OUTPUT   | Placement heatmap + anchor-cloud stance    | Maturity baseline + savings + practice | AI opportunity map + first wave      | Strategy + phased migration roadmap | Scorecard + remediation             |

CROSS-SELL

Sovereignty and AI Act lenses run through every offering — a natural cross-sell into the Digital Sovereignty pillar. PC1 and PC4 overlap deliberately: PC1 is the sharp placement decision, PC4 the full adoption plan.

## PILLAR 3 · CORE INFRASTRUCTURE

# The Estate That Stays Close to the Business

Advisory across the infrastructure that stays close to the business — private cloud, edge computing and the on-premise data centre — modernised for an AI-, cost- and sovereignty-driven era.

## NEED OF THE HOUR

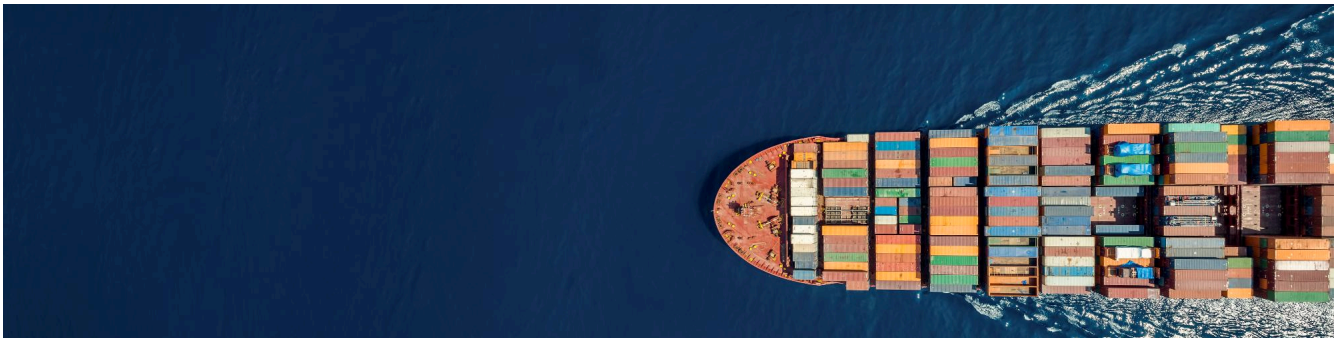

- ~76% of CIOs are negative on Broadcom's VMware changes; ~67% are pursuing alternatives.
- ~56% of enterprises now run or plan AI inference on private cloud.
- Latency-sensitive, data-gravity workloads are pushing compute to the edge.
- Data-centre modernization and exit decisions need a hybrid-by-design plan.

## OFFERINGS UNDER THIS PILLAR

Private Cloud & VMware-Alternative Advisory

Edge Computing Strategy & Workload Placement

Data Centre Modernization / Exit Advisory

**STATUS** The pillar is open for client conversations now. Detailed Level 1 engagement packaging — duration, deliverables and scope — is in development, following the same Understand → Ideate → Accelerate model as Digital Sovereignty and Public Cloud.

## PRACTICE ROADMAP

# What's Next – Coming Soon Pillars

Three additional advisory pillars are framed and in development, extending CIS Tech Advisory across the rest of the enterprise IT estate.

COMING SOON

## Private Cloud & On-Premise Data Centre

Dedicated Level 1 offerings for the private-cloud and on-premise estate, building on the Core Infrastructure pillar.

**Need** · VMware-alternative pressure accelerating private-cloud decisions    AI inference workloads moving back on-premise  
DC exit & consolidation plans need a clear roadmap

COMING SOON

## Networking Advisory

Modernising the enterprise network for a cloud-, AI- and hybrid-work-first world.

**Need** · A decisive shift from appliance-based WAN toward SASE / SSE    Hybrid work & multicloud strain legacy network designs  
AI and edge traffic reshaping bandwidth and latency needs

COMING SOON

## AI Infusion Advisory

A dedicated pillar to infuse GenAI and agentic AI across processes, applications and the infrastructure estate.

**Need** · ~98% of FinOps teams manage AI cost; AI value mgmt is the #1 hiring skill    Scattered AI pilots with no path to production  
EU AI Act obligations (from Aug 2026) demand governance

## VALUE DELIVERED

# Outcomes Across Every Engagement

Clients adopting CIS Tech Advisory achieve measurable outcomes across clarity, compliance, cost and secure AI innovation — advisory that leads to action.

## Clarity Before Commitment

Board-ready reads on exposure in days, not months — a single common view where teams heard DORA, NIS2 and the EU AI Act separately.

## Defensible, Costed Roadmaps

Evidence-based, sequenced plans tied to regulatory deadlines that boards and regulators can trust.

## Reduced Concentration Risk

First-pass exit and multi-vendor strategy surfaces hyperscaler and vendor lock-in early and lowers it.

## Right-Sized Investment

Roughly one-third of Tier-1 consulting fees, delivered largely offshore, with co-creation and weekly checkpoints keeping you in control.

## Advisory That Leads to Action

We advise and can also deliver the remediation — the roadmap we propose is one we can build and run, lowering execution risk.

## Governed AI Adoption

Infuse GenAI and agentic AI across the estate with sovereignty, cost and responsible-AI guardrails built in from the start.

LET'S START THE CONVERSATION

# Position Offering A as the easy first step

One week. Board-ready output. A natural path into the full advisory practice.

## DIGITAL SOVEREIGNTY

### Quick Posture Assessment

1 week · board-ready read on exposure

## PUBLIC CLOUD

### Right Cloud & Placement

3–5 weeks · the right home for every workload

## Take control of your infrastructure agenda.

Bring the offer to sales & client partners today — the low-risk entry point on any account feeling regulatory or hyperscaler-concentration pressure.

LTM is a global technology services and consulting company and the business creativity partner to the world's largest and most disruptive companies. Together with our global network of hyperscaler partners, LTM — A Larsen & Toubro company — owns business outcomes for its clients, helping them not simply to outperform the market, but to **Outcreate** it.

## EXECUTIVE SUMMARY

# Advisory at the Core of Every Infrastructure Decision

Enterprise IT and infrastructure decisions have become board-level questions — regulatory (DORA, NIS2, EU AI Act), economic (cloud and AI spend) and architectural (where workloads should live) all at once. CIS Tech Advisory gives clients a fast, credible, advisory-led way to answer these questions — and, because we also deliver, a partner who can execute the answer.

## WHY THE TIMING CAN'T WAIT

**Regulatory convergence**

DORA, NIS2 and the EU AI Act all reach live enforcement in 2026 — compliance is now an operating question.

**Runaway cloud & AI spend**

Cloud and AI costs are material and largely ungoverned; FinOps is now accountable for both.

**Workload placement**

Where each workload should run — public, private, edge or repatriated — has no agreed rationale.

**Hyperscaler concentration**

Heavy dependence on a single hyperscaler creates lock-in, exit and resilience risk.

**No single view**

Teams cite different regulations; there's no common picture across IT, security, legal and the business.

**Modernization pressure**

VMware-alternatives, AI inference moving on-prem and DC-exit plans need a hybrid-by-design roadmap.

**HOW IT WORKS**

Every pillar runs fixed-scope Level 1 engagements on the same **Understand** → **Ideate** → **Accelerate** model — fast, fixed-fee, and a natural path into larger transformation work.
